

ADVISORY ON PANGOLINS

What are they? This is not a reptile! The Sunda pangolin or Malayan Pangolin (*Manis Javanica*), also known as the scaly anteater, is a shy, nocturnal, solitary mammal covered in scales that are made of compressed hair.

When threatened, it curls up into an armoured ball. It may also use its anal gland to produce a foul smell to deter predators.

Sunda pangolins reside in Southeast Asia. In Singapore, they are mainly distributed in the Central Catchment Nature Reserve and Bukit Timah Nature Reserve. They can also be found in forested areas in Bukit Batok, the Western Catchment Area, and on the islands of Pulau Ubin and Pulau Tekong. They sometimes wander into residential areas from nearby woods.

Important Ecological Roles

Control of the termite & ant population

Pangolin adults may consume about 70 million insects per year.

Their digging action used when feeding also helps to loosen and aerate the soil.

Threats

The Sunda pangolin is listed as “**critically endangered**” in the Singapore Red Data Book 2008. In Singapore, the pangolins face the greatest threat from rapid urbanisation that resulted in massive habitat loss.

The slow-moving pangolins are also often injured or killed by vehicles when they stray off too far from the forested areas onto roads.

Globally, pangolins are greatly poached for its meat and scales, the latter in which is believed to have medicinal value.

As the pangolins have a low fecundity rate of only 1 to 2 offspring per year, the global pangolin population is depleting at a much faster rate than it can recover.

Conservation In Singapore, it is illegal under the Wild Animals and Birds Act to remove wild animals, including pangolins, from the wild. Those found in nature reserves are also protected by the Parks and Trees Act 2005. Furthermore, a total trade ban has been placed on wild pangolins under the Endangered Species (Import and Export; CITES) Act.

How can I help?

- ✓ **If you witness any illegal trading or poaching:**
 - **Collect information.** Take photos or video evidences of the traps, snares, nets, trapped animals, poachers, and/or their vehicle license plate number.
 - **Call NParks at 1800-476-1600.** Alternatively, you can call the local police.
- ✓ **Do not buy any pangolin products**, such as meat, scales and medicinal products.
- ✓ **Raise awareness** by sharing with your friends and family about the threats to pangolins, and what can they do to help.
- ✓ **Report your sightings**, and contribute resources or media you have to various animal research and welfare groups to assist in research and conservation efforts.

What to do when I encounter a pangolin?

- ✓ **Do not be alarmed.** These animals are shy and will not attack humans.
- ✓ **Do not touch, chase or corner them**, as they will be frightened from your approach. You are advised to leave them alone.
- ✓ **Observe them!** It is not very often that you will get to see a live pangolin. Share your findings with pangolin research and welfare groups.
