# Student reflection

My first Kang kong plant was awesome!

On the first day of planting the KangKong seeds, it already started growing!  
I followed the instructions given by SLS.

The second day I almost forgot to water the plant. Luckily, my father reminded me to do so.

On the third day, I started seeing leaves grow so that the plant's leaves will make food!

On the fourth day, I started decorating my plant a little. At first, I just wrote my Kang-Kong's plant name.

Then on the fifth day, I decorated some more with a bunch of highlighters, certain pens, and so on.

On the sixth day, more double-paired leaves grew.

I also noticed that the outer layer of the KangKong seeds went to grow on the leaves!

I took it out in order for more of the leaves to participate in growing and making more leaves. On the seventh day, it was ready to put the picture in the image above.

I enjoyed growing the plant because I love to see nature unfolding itself. I have learned patience because it took a week doing the Every Child A Seed competition. I love what I have done as 'Silvally', which is my plant's name as shown here, grow beautifully and nicely.

I hope to see more fun activities shown in the next year.
