

Our Wild Spaces

Mangrove forests grow by the sea, in brackish water (where freshwater and seawater mix). The soil has little oxygen.

Special animals live here too.

How many of these plants and animals can you see?

Great-billed Heron

Pacific Golden Plover

Little Egret

Common Redshank

Eurasian Whimbrel

Mangrove Cannonball Tree

Bakau Pasir

Tumu Merah

Api Api Putih

Golden

Orb Web Spider

Mangrove Pit-viper

Nipah Palm

Mangrove Pit-viper

Cotton Stainer Bug

Ashy Tailorbird

Mangrove Pitta

Tree-climbing Crab

Mud Lobster

Mud Lobster mounds

stilt roots

knee roots

pencil roots

Mangrove Horseshoe Crab

Giant Mudskipper

Mangrove trees have special roots that stick out of the soil to help them breathe. Different trees have different types of roots. They are named for what they look like!

Wildlife and Us

We share a home with many different kinds of animals and plants in Our City in Nature. What should you do when you see them?

Do stay a safe distance from wildlife.

Keep calm and quiet so they will not be scared.

Do not feed wildlife.

Wild animals know how to find their own food. Our food may make them sick.

Do keep food and plastic bags away.

Animals may think you have food for them and come towards you.

Do not release pets into the wild.

Your pet may not survive in the wild and may harm the plants and animals living there.

Do throw rubbish into bins properly.

Be considerate. Help keep the environment clean and safe for everyone.

Do not disturb wildlife. Do not use flash when taking photographs.

It may shock or frighten them. The bright light may also hurt their eyes.

Do stay on trails.

You may step on plants and scare animals. Walk only where you should to help protect wildlife.

Do not bring pets into nature reserves and nature parks.

Your pet may disturb wildlife. They may even catch or pass germs to wildlife that make them sick.
